

SISTEMA OPLÀ

ONE PEOPLE LIMITED ACCESS: a unique and innovative system that controls and ensures the single access to authorised people in dedicated and/or protected areas.

This system not only recognises the authorised person but can also check the presence of strangers by analysing the surrounding area.

In this case, it prevents the stranger from accessing the booth and prompts him/her to clear the area.

An alarm will set off in the event an intruder attempts to enter with the doors open. This warning can be interfaced with the existing alarm system.

OPLA' is equipped with state-of-the-art high precision sensors and software, which ensure a secure, high-performance, and innovative access control system.

Standard equipment:

- People detection sensors and counters
- Optical/acoustic warning device
- Interface card with access control
- Speech synthesis
- Warning for excessive door opening time

Optional equipment:

- Event memory (up to 10,000 events)
- Bluetooth
- Authorisation system even on the inner side
- RTC (Real Time Clock) with time zone control
